

Curriculum Development Process

26/04/20

Curriculum came from a Latin word called Currere which means a Race path. (Running course)

Defined by Casul and Campbell (1935)

Curriculum are the experiences that students have under the guidance of the school.

This definition was later modified by Doll (1989)

Def as The engagements that learners have under the supervision of the school.

The Curriculum is defined as all the experiences and engagements whether planned or unplanned that learners have under the guidance of the school.

The Attributes of the Curriculum

Curriculum Policy

These are rules, regulations and guidelines which specifies how activities in a school to run teaching take place in school.

Example: French, English and Maths are compulsory courses.

Core Curriculum

Are essential discipline in school and are required to bring

by Core Curriculum.

Subjects that are important in the school for all learners to do.

Formal Curriculum/written

What has been lay or written down to guide teaching in school.

Example: Syllabuses given to teachers by the minister and broken down to a lesson plan

Syllabuses - Scheme of work - Lesson plan

Taught Curriculum

What the teacher teaches.

Learned Curriculum

What learners learn

Hidden Curriculum

The hidden curriculum is not planned that is, it is implicit. The external knowledge students learn out of that are not specifying in the form of the formal curriculum. (Example: manner in which your teacher speak)

Co-Curriculum

Simply refers to those activities that takes place out of the class room but complement in what student learn. Ex: Sporting clubs, field trips etc.

Tested Curriculum

That curriculum that emerges in the form of test or examination which students know (he said that worth Example: Semester Exams)

Components of a Curriculum

Goals and objectives

Goals or broader and General Statements while objectives are Specific Statement, with expected (intended) outcome (Consider the learners when setting your goals)

Learning Experiences

They are activities that students performed in and out of a classroom in relation to a particular lesson. (You must engage learners).

Content / Subject Matter

Those material that have been carefully selected to meet up with the stated objectives.

Methods (Teaching Method)

Standard procedures used in presenting our content. Example: Lecture, Question and answer, etc.

Learning Materials

the things taught used for better understanding of student.

They are classified in different levels
 You can see Print materials, audio materials, visual materials, audio-visual materials, Real objects, models, slides, TV, Video, VCR

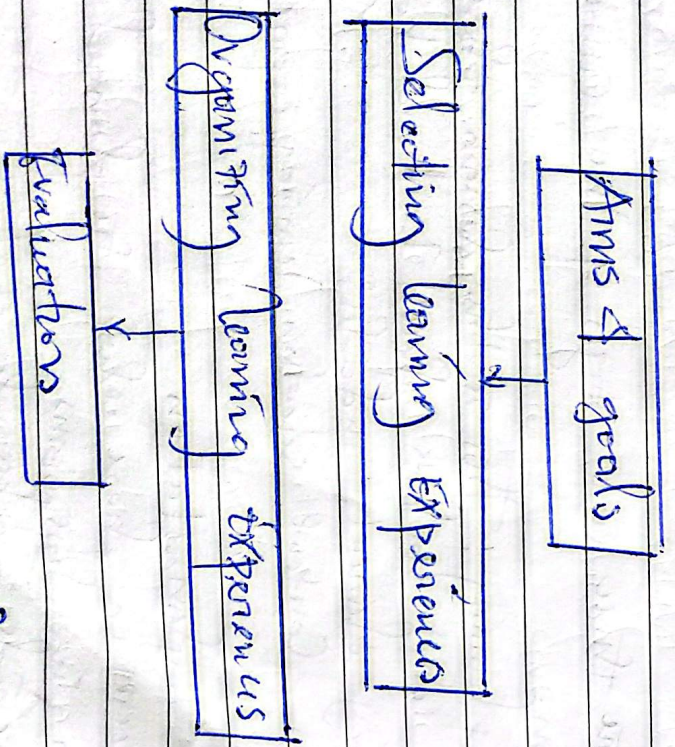

Evaluation

The process of giving verbal judgment on whether learning has taken place or not.

Forms of Evaluation:
 Diagnostic, Formative, Summative.
 These forms of evaluation fall within the different stages of teaching (Pre-teaching, Teaching, Post-teaching).
 Evaluation that takes place before teaching

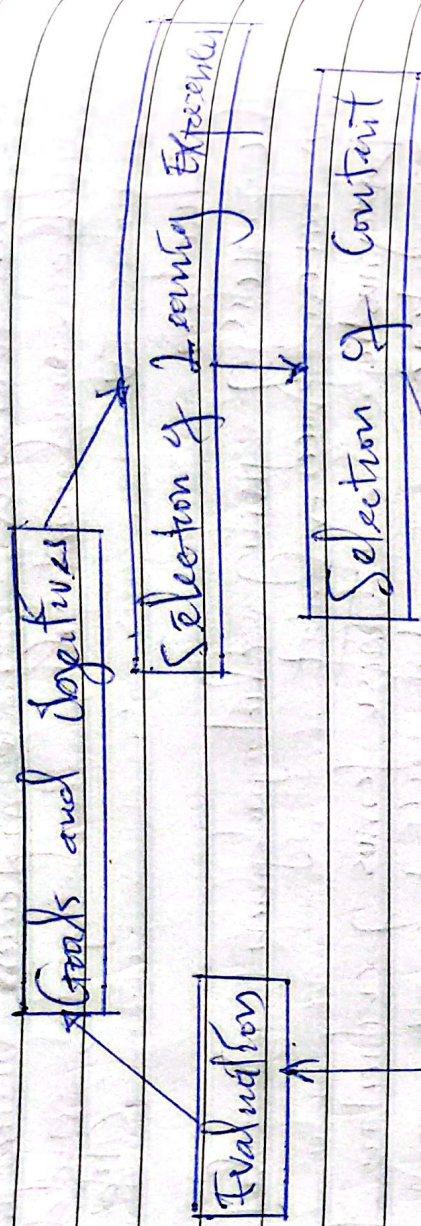

Structures of Curriculum Development

Tyler's Model: Published in a book titled Principles and methods of teaching. The core of questions in the book: Where are we going? How do we get there? How do we know we are there?

Wheel's Model: It is named after Leta S. Stetter Keiser. She argued that the model of Tyler's is flawed.

not stop at evaluation

Organization of Content

In Tyler's model, evaluation is the last stage of the model, while Wheeler's model is a circle that gives feedback.

Tyler's model is a four stage model. Wheeler's model is a 5 steps

Key: Based on Curriculum planning, Implementation and Evaluation

There are the three core stages of the curriculum development cycle in education

Curriculum planning: This is the design phase, where decisions are made about what students should learn and how learning will be structured. Key element includes: Objectives, Goals, Content selection, Learning experiences, Organization, Programmes.

Curriculum Implementation

This is the execution phase, where the planned curriculum is put into action in classrooms. Teaching methods, Teacher role, Student engagement, Learning environment, Support systems.

Curriculum Evaluation

This is the assessment phase which determines whether the curriculum is effective.

Key elements, Student assessment, Program evaluation, Feedback, improvement.

Type of evaluation: Diagnostic, formative, Summative.

Planning - gives direction

Implementation - brings the plan to life

Evaluation - checks effectiveness and infers improvements.

Curriculum Design Approaches

or, the subject centered approach/curriculum

or, the subject centered approach as the name implies is organized around subjects and disciplines. many turn to defined it as the subject taught in school like french, English, mathematics etc. They are arranged according to simple to complex. Example: as a mathematician you start from simple topics to difficult ones. It is named top-down organization. Some of these subject matters are brought into broad field. If you teach maths, you can teach physics, chemistry. These are cross broadfields.
Key: Find their characteristics.

or, Learner's centered approach/curriculum

We put the learners in the center putting in their need and having the learner-centered approach is a teaching method that places the student at the center of the learning process. It focuses on learner's needs, interests, abilities, and learning pace. Example: CBA centered based approach; what we use to start on person.
NB: Characteristics of a learner's centered approach.
of the level of interest and needs of the learner forms the basis of such decisions are made about the subject matters

Time tables are not rigid but they're flexible so that learners can select their learning opportunities (what they want to learn) and an end. Teaching is a systematic procedure that has a start and an end. Tensors are learners from the learning activity together with the subject matter is not considered as content but as learned form.

5) Schools Counselors are there to assist to the students problems.

6) the curriculum used here is not in terms of syllabus.

Society centered Approach

The Society-centered approach is a curriculum approach that focuses on the needs, problems and expectations of the society. If looks at how we live in the society. Education is designed to prepare learners to become useful, responsible and active members of society.

Characteristics of SEA

1. The curriculum does not focus on social and individual problems of living within a community.
2. The steps of the curriculum is defined by the least of a problem.
3. The academic discipline from which they obtained the sequence of learning is also determined by the complexity of the subject. (from simple - complex)

Based on Lesson Planning and Components of Lesson Planning.

Lesson Planning

Elements of a Lesson Planning

1) Objectives: Specific aims to be achieved at the end of the lesson.

2) Importance number of objectives in a lesson should be 3

Lesson Plans are guidelines drawn up to help the teacher conducting a classroom lesson.

There are two main types of lesson plans.
Topic or Unit Lesson Plan and Day Lesson Plan
 entire lessons.
 Lesson within the unit

1) Content or Subject matter

The main content of your teaching notes. First is what you are going to teach and it should be aligned with your objectives.

2) Learning activities

From the content you bring out the learning activities that is what the student will do in relation to a lesson.

3) Learning materials

These are materials used by teachers in class for better understanding of students.

4) Methods and techniques to be used

The teacher looks for the best method for every teaching.

5) Evaluation

Some instructional tasks of a teacher during

Lessons:

1) Stimulating attention

Make your lesson interesting that prompts students participate. Bring in a stimulus to gain the attention.

2) Informing learners about the lesson objective.

your objectives should be clear, measurable and achievable it should be smart. (Simple, measurable, achievable, relevant time)

- 3, Helping learners to recall relevant capabilities of what they know (like recalling of the previous lessons).
- 4, Providing Guidance
- 5, Providing feedback. (making comments on learner's progress)
- 6, Assessing performance. Make sure that everybody is progressing.

Role of Assignment / Homework in the Classroom

→ Motivation

Definition: Something that arouse interest for a person to achieve something.

Types: There are two types: Intrinsic and Extrinsic Motivation.

Role: Improves individual and group skills (skills like interpersonal skills, problem solving skills, listening skills, self confidence etc.)
Catering for individual's needs and interests

Organizing for Teaching and Learning in School / Grouping and allocating learners and teachers in school

In a classroom we either have vertical or horizontal organization

a. Vertical Organization

Students learn moving from one level to another like class 1, 2 and 3

there are two types of vertical organizations namely

a. Graded approach: Means we use the graded (average) to send a student to the next class (classroom)

b. non Graded approach: Use the competence of the students, progress with you as you're progressing.
(Example students in a mechanic workshop)
non learners belong to a particular class.

a. Horizontal Organization

These are too namely:

- a. Group teams for daily teaching
these ^{ways} make the following groups
ability/homogenous group $\leftarrow$ ^{intra-class} and ^{inter-class}

mixed abilities/heterogeneous grouping

- b. Allocate teachers to group of learners

Self Contained classroom

One teacher assigned to teach the entire class for the academic year.

Departmentalism

Science Department, Language etc the teachers teaches in their various Dept

Sem-Departmentalism (Teachers that teach like Physics & Maths)

Team-teaching

Assignment

Bloom's taxonomy of Education Objective
(Only Cognitive Domain)

Read about Evaluation, Types of evaluation and characteristics of a good evaluation).

Planning

Implementation

Evaluation

Principles that guide Organization for teaching and learning in school.

Components of curriculum
General planning of lessons.

Horizontal organization means linking different subjects or learning experiences at the same educational level. It emphasizes integration across disciplines. Learning is integrated within the same level.

Elaboration

When are the three evaluation types differentiated?
a) when (time of evaluation)
as when (frequency of evaluation)
as when (remediation is the aspect of evaluating the evaluations)
